FLIX

IMPROVE YOUR GAME WITH HIGH-SPEED SWING CAPTURE

The Pros say they can feel their swing, but even they turn to instructors for help when what they feel and what they see on the course aren't in alignment. Take the subjectivity and guesswork out of your swing analysis with precise measurements and synchronized visuals.

The aG Flix video system is integrated with your simulator (and upgrades like aG Balance PRO) to get the most precise player data available in the game.

SYNCHRONIZED ANALYSIS

aG Flix video is time stamped by the system, enabling synchronization at the instant of impact. It can also be integrated with data from aG Balance Pro, allowing side-by-side display and more ways to view and analyze results.

HIGH QUALITY VIDEO

aG Flix provides new, high-quality color video of your swing from every angle. aG Flix uses "Interrupted Interlacing," a process that produces cleaner, smoother video.

MULTIPLE SWING SEQUENCING

Analyze multiple swings in sync to evaluate a swing over time, evaluate a swing from multiple angles, or compare a swing with a professional.

TEACHING TOOLS

Drawing and analysis software options enable the teacher to dissect the swing, annotate elements of the swing, and compare performance to available pro videos.

LIVE VIEW

Observe the swing on screen in real time. When set to live view, the image will be in sync with the player's movements.

STOP IMAGE AT IMPACT

aG Flix is guaranteed to capture high quality video at the moment of impact to further enhance swing analysis.
